Dear Researchers,

Research publication is an essential component of contemporary academic medicine, facilitating the dissemination of scientific knowledge, critical appraisal of evidence, and translation of research findings into clinical practice. Publication of high-quality research in internationally peer-reviewed, indexed journals can enhance an author's academic visibility and contribute to their research track record, which may be considered in grant applications and academic promotion, depending on the relevant institutional criteria.[1-3]

I am truly delighted and privileged to write this note as the Editor-in-Chief of the second issue after the inaugural issue of the Journal of Scientific Innovations in Anesthesiology (JSIA). It gives me great pleasure to introduce this esteemed Journal to the academic community of anesthesia and invite you all to consider JSIA as a reliable platform for your valuable scholarly research submissions. JSIA is an international, peer-reviewed, open access journal committed to the highest standards of academic publishing ethics and scientific integrity.

JSIA (jsiajournal.org) is an open-access journal, which promises to strive for publishing excellence, maintain strict adherence to standard international publication standards including Committee on Publication Ethics (COPE) guidelines and firm compliance with ICJME recommendations, Helsinki Declaration, and ARRIVE Guidelines. All the submissions will undergo rigorous peer review process of double-blind review involving national and international experts of the specialty and specific domain. Further, all the submissions will be screened for plagiarism using standard internationally recognized engines i.e.,

iThenticate/Turnitin.[4] We would follow a completely transparent review process with unambiguous and unbiased editorial decisions for all submissions and always aim to provide constructive feedback.

The Journal is Google Scholar indexed, and every accepted article is assigned a CrossRef DOI for permanent identification and citation tracking and will be published online immediately. Author's work is preserved in Internet Archive for digital archiving ensuring long-term accessibility. In the future, we plan to explore other digital archiving systems, such as Portico or CLOCKSS. This will ensure an immediate global recognition of scholarly work and ensure that author's research work is easily discoverable worldwide, citable, and accessible to the global anesthesiology community immediately after publication.

Furthermore, authors won't have to face any financial barriers to make their valuable work visible to anesthesia community if they choose JSIA.[5] We are extremely pleased to announce a launch phase waiver on publication fees to support early career researchers enhance their academic profile and help build our author community. This will go a long way in our endeavour of establishing a strong foundation of quality research. Our editorial team will provide constructive feedback and language editing assistance to help authors present your research in the best possible way.

The journal has a clear, systematic roadmap for major database inclusion and in its pursuit of excellence, JSIA is bound to chase its DOAJ and Scopus indexing in near future. With the current indexing of google scholar at hand in inaugural issue and its successful past achievements, and an extremely capable national and international editorial team from top notch academic institutes, I am sure, the timelines of around 1 year for DOAJ indexing, and 2 years for Scopus indexing can be readily met. As the journal indexing advances, authors and early career researchers would benefit from the further improved article metrics.

The scope of journal includes general and regional anesthesia, pediatric and obstetric anesthesia, acute and chronic pain management, critical care and intensive care, cardiac and thoracic anesthesia, neuroanesthesia, perioperative medicine, patient safety and quality, anesthesia technology/ equipment, and emergency/ trauma anesthesia.

We welcome high-quality articles in all these areas of anesthesiology which can be original research with novel findings, review articles, comprehensive systematic reviews and meta-analyses, case reports on interesting clinical cases with some educational value, short communications on preliminary findings and brief reports and letters to editor: commentary on published articles. Informed Consent, and data transparency would be considered mandatory for all clinical research and there would be zero tolerance for any kind of research misconduct. Contributors are encouraged to read and ensure that the author guidelines are followed before article submission to ensure compliance with its formatting and ethical requirements.

Quality of published articles would be given more weightage over speed. Publication certificate would be provided to early contributors for their academic portfolios.

To conclude, I consider JSIA a powerful leap ahead to support the academic arena of our country to grow in the right direction. Me along with the whole editorial team are committed to research excellence and would strive to make this journal as one of the leaders in the field.

Financial Support and Sponsorship

None.

Conflict of Interest

None.
